

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

## NEW COLOR VARIATION OF STORERIA OCCIPITOMACULATA

During the first week in August, 1914, I collected a small black-colored snake near Cammal, Pa. It attracted my attention, as I was not familiar with the coloration that was presented. Examination revealed a peculiar phase of the red-bellied snake, of which I was unable to find a description in any of the standard works upon reptiles. Through the courtesy of the Academy of Natural Sciences of Philadelphia, I was permitted to examine the varieties of red-bellied snakes in their collection. In looking over the specimens I found one that simulated mine. This reptile was collected at Johnsonburg, Elk County, Pa., by Cope. He described it as being a very dark brown, with the dorsal band obscure, and the under surfaces black. The throat and chin were whitish, and the black darkest in a row of spots on each side of a dozen anterior gastrosteges. The reptile I found measured 24 cm., was distinctly black on the dorsal and ventral surfaces, the throat and chin white, sprinkled with small black spots; the stripes on the sides could only be detected by having the light strike the reptile in a certain manner. When the two reptiles were placed side by side, Cope's specimen was lighter in color, both on the dorsal and ventral surfaces; the stripes on Cope's specimen could readily be seen as compared with the reptile under discussion.
